

ALUCA[®]

In-Vehicle Equipment

LIGHTWEIGHT ■ SAFE ■ CUSTOMISED

From a modest workshop...

Having started out as a small workshop back in 1993, we are currently a well-established medium-sized company with around 200 employees and are part of an international corporate group. We have more than 30 years of experience, and every day our employees at our six sites – five in Germany and one in the Netherlands – manufacture customised in-vehicle equipment that meets the highest quality standards and with the highest level of craftsmanship. Your industry-specific needs and requirements are a priority in our day-to-day operations and serve as the foundation for developing customised equipment solutions.

ABOUT ALUCA

...to a leading manufacturer of in-vehicle equipment

Our payoff, 'Better with every grip', is not just a promise we make to you. At ALUCA, we abide by this philosophy and have made it our mission to provide you with solutions for customised flexibility and sustainable productivity in your day-to-day work. Our challenge is to equip your vehicle based on your industry's specific needs and to adjust its equipment to your individual requirements. Together, we provide you with the foundation you need for safe, secure and more efficient mobile work – so you'll spend less time looking for small parts and components and will have

more time to spend with your clients or customers. Our dedicated employees have been invaluable in contributing to this process for many years. They have made us into the company we are today, and together we are committed to providing the most lightweight and most efficient equipment solutions in the market by using aluminium in the manufacture of our products.

- ✓ **Made in Germany**
High-quality products that ensure a long life for your equipment

ALUMINIUM:
LIGHTNESS
IS OUR
STRENGTH.

100% aluminium: 100% convinced

Why ALUCA believes in aluminium: By consistently using the innovative ingredient aluminium, we can achieve our objective and manufacture the most lightweight in-vehicle equipment available in the market, helping you to – quite literally – make your everyday work lighter. The high-quality materials we use ensure that our in-vehicle equipment serves as a standard for stability and robustness.

- You will find further information about the uses and properties of aluminium at the following link:
aluca.de/en/company/aluminium/

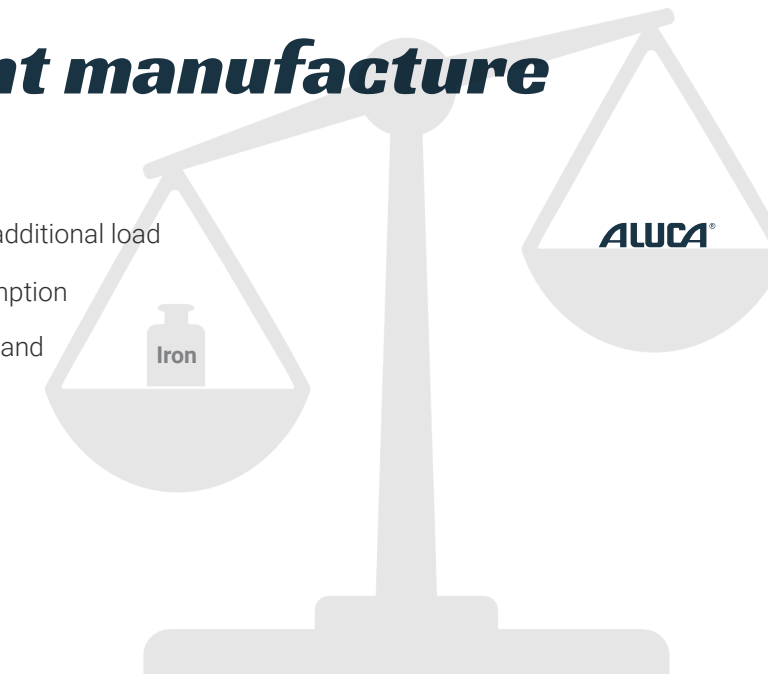

ALUCA IS ALL ABOUT LIGHTNESS

Innovation through lightweight manufacture

At ALUCA, aluminium is the material that holds everything together. This lightweight 'miracle material' is not just the key to our high-quality in-vehicle equipment, but also the engine that drives us every day to become better and to create and construct the perfect, most lightweight and most efficient in-vehicle systems. This means an optimum installation weight of all the components you need in your everyday work to ensure a higher load – and for your in-vehicle equipment: a maximum life span.

- Low net weight
- Facilitates higher additional load
- Lower fuel consumption
- Low-maintenance and wear-resistant

CUSTOMISED RACKING SYSTEMS

ALUCA IS ALL ABOUT CUSTOMISATION

Designed specifically for your sector or industry

Our in-vehicle equipment solutions are versatile as can be. No matter what your needs and requirements might be, we provide you with a customised mobile storage system for your commercial vehicle that is tailored to the needs of your specific industry. In order to be able to create in-vehicle equipment for a wide range of sectors and industries and meet their requirements as efficiently as possible, we have created a product range consisting of different series. In terms of modular variety, we provide

29 different heights, 5 different depths and 8 field widths. By adding ALUCA dimension2 underfloor system, you can use all of a vehicle's loading space. More than 1,000 accessory items ensure that the functionality of the in-vehicle equipment can be adjusted to previously impossible heights.

■ You will find further information about our products at: aluca.de/en/product-range/

▲ System ALUCA allows you to use any combination of individual components. This makes it possible to adjust any in-vehicle equipment to your individual needs.

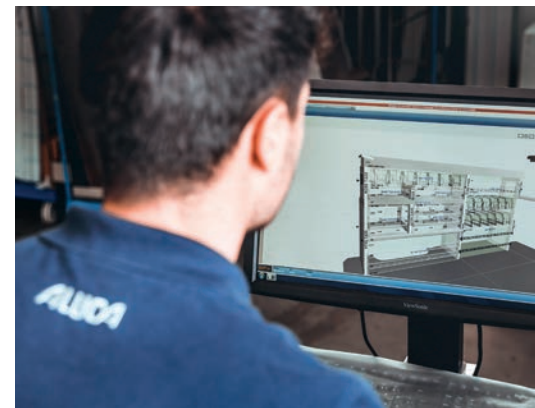

▼ ALUCA dimension2 features a second layer that saves you the trouble of having to frequently rearrange items inside your vehicle. The large-capacity drawer allows you to access the in-vehicle equipment at any time, even when your vehicle is fully loaded.

Customised equipment solution for the effective use of space

Whether you're looking for preconfigured modules or customised ones based on your requirements: you tell us what your perfect in-vehicle equipment looks like and we will provide you with different needs-based solutions to create a customised racking system. This provides you not only with a well-organised mobile workspace, but also with more security and time for your everyday work.

■ We will be pleased to advise you on individual solutions for your vehicle. You can contact ALUCA through the following link: aluca.de/en/contact/

CRAFTSMEN SOLUTIONS

Smart functionality **Efficient work**

In order for you to perform your work as safely and efficiently as possible, it is essential that you think about load safety in the loading space of your commercial vehicle. We provide you with equipment solutions that are tailored to the needs of your industry and your individual needs. They will help you organise your load space and provide you with the opportunity to store any equipment you take with you safely and securely and in a well-organised way. Everything has its own place inside the vehicle, ensuring that tools can be found quickly and intuitively and you don't need to spend a long time looking, making your day easier altogether.

Greater efficiency in our mobile workshop

- Efficient use of space for organisation into the smallest detail
- Ergonomic loading and unloading of the in-vehicle equipment
- Flexible and efficient work in and around the vehicle
- Conveniently arranged and securely stored devices, tools and accessories
- The mobile storage space is always visible – plus, no more empty runs
- Saving time: Spend less time looking and more time with customers
- Mobile 'calling card' and making a professional impression on customers

ALUCA IS ALL ABOUT EFFICIENCY

We understand your requirements

We know what matters in the various sectors and industries and what requirements the storage space of a commercial vehicle must meet. There are few things more stressful than having to spend a long time looking for a particular tool or component while you're visiting a customer or client. Thanks to smart and individual planning and the high-precision manufacture of each individual piece of vehicle equipment, you will save both time and money and will make a professional impression on your customers or clients. Bulky tools, devices, replacement parts, small parts and

components, and utensils are securely and ergonomically stored. Whether you drive a compact town car or a spacious heavy-duty vehicle, together we will configure the individual features you are looking for and give you the safety you need for the storage space of your commercial vehicle.

The great benefit for your fleet management

Here at ALUCA, we think carefully about every kilo, so we can reduce the overall weight of any fleet. We develop and manufacture special lightweight in-vehicle equipment for you made from aluminium, which both increases payload and saves costs.

- Reduced carbon emissions
- Ergonomic planning
- Successfully crash-tested system
- High residual value and resale value
- Low-maintenance and durable

ALUCA IS ALL ABOUT PREMIUM QUALITY

When quality meets safety

The in-vehicle equipment manufactured by ALUCA is always subject to rigorous quality inspections. All in-vehicle systems are installed in the vehicle by qualified professionals and inspected before delivery. Since safety is our number-one priority, our systems are crash-tested. System ALUCA has proved itself not only in crash impact tests, but the German technical inspection

agency TÜV Nord has also tested our system for safety and quality and awarded both with the GS (Geprüfte Sicherheit – Proven Safety) quality mark. We believe in our products and their quality and provide you with a unique 8-year premium warranty on your in-vehicle equipment.

Proven quality

- Certified quality management
- Rigorous quality inspection before delivery of in-vehicle equipment
- Certified by TÜV Nord
- Made in Germany
- Awarded with the GS (Geprüfte Sicherheit – Proven Safety) quality mark
- ISO 9001- and 14001-certified
Energy audit in compliance with DIN EN 16247-1

8-year premium warranty

PARTNERS NETWORK

ALUCA IS ALL ABOUT PARTNERSHIP

Our strength lies in our lightweight designs

It's not just our products that must meet the strictest of requirements, but our services as well. Our advice and planning are tailored to your individual needs and requirements. You can rely on our professional partner network.

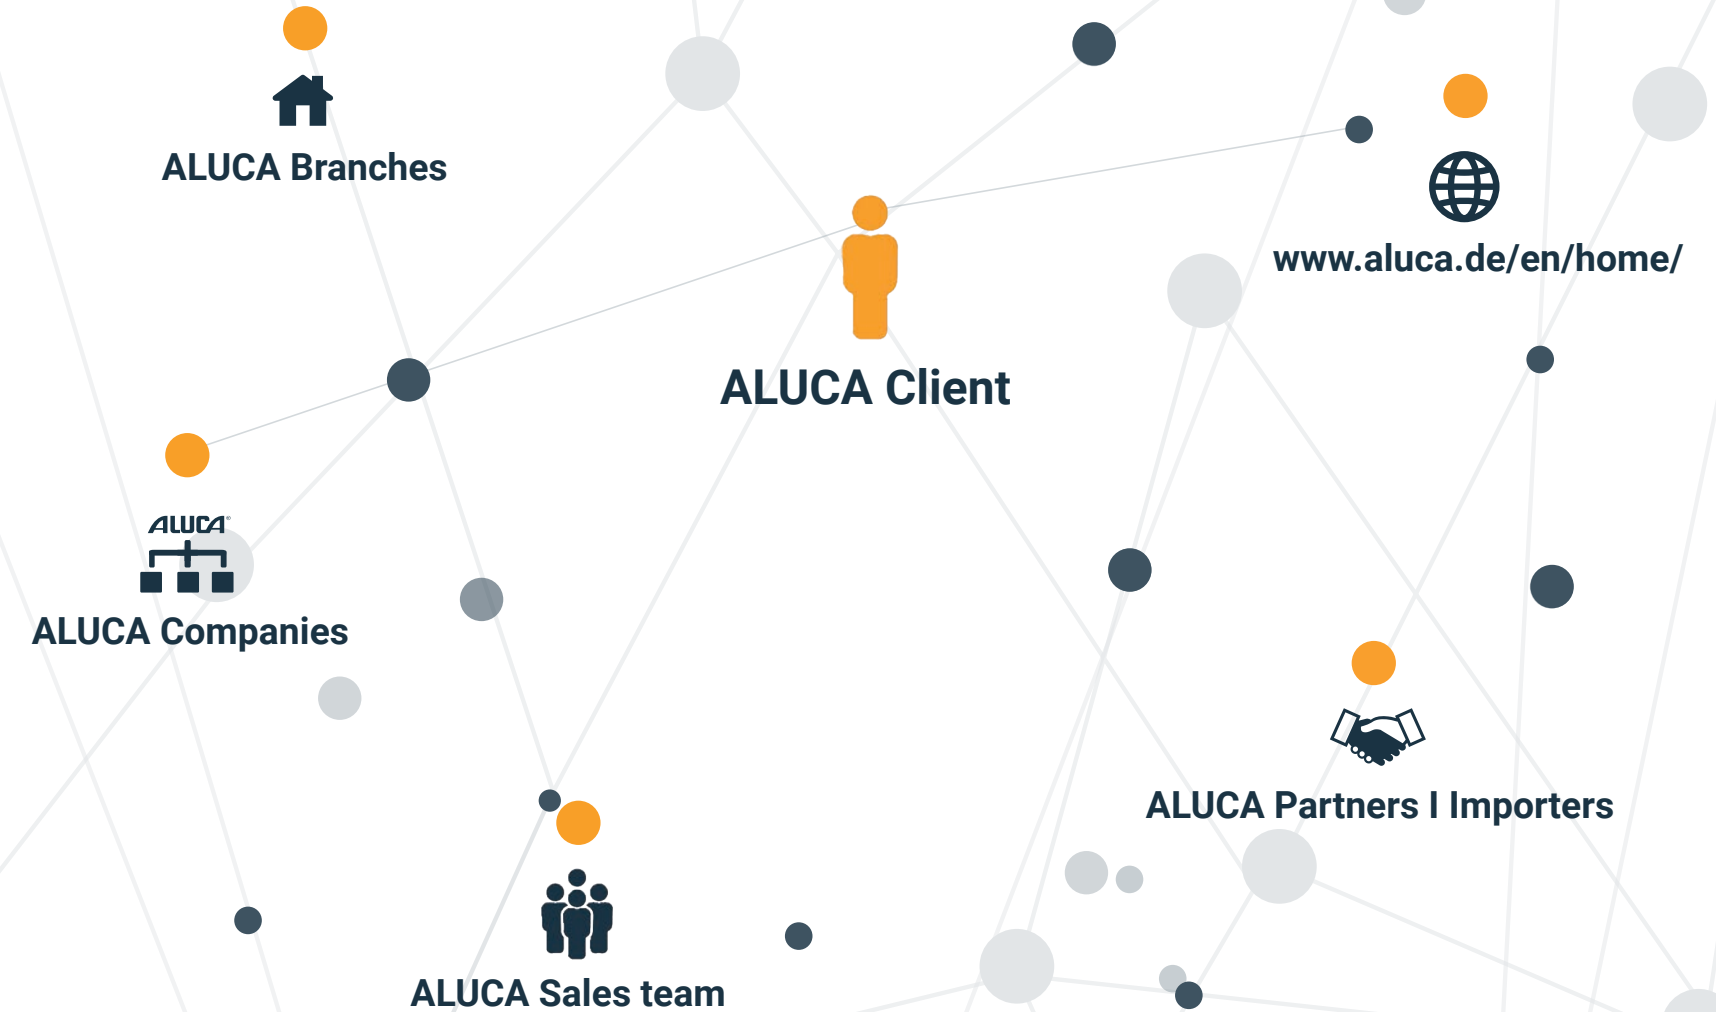

In addition to having our own regional and area sales managers, we also work closely with a number of independent dealers. Our German and international ALUCA Partners offer both competent product planning and comprehensive services including assembly,

installation of accessories, and other certified services. We perform installation either directly or through our ALUCA Partners and Installation Partners in your area.
